Christmas Trees 2023

Once again this year, our churches will be surrounded by REAL Christmas trees illuminated beautifully with lights and on each tree will be a beautiful plaque dedicating that Christmas tree as a memorial to someone who has died or perhaps as a gift for the living, or perhaps in Thanksgiving for what God has given. Throughout the Christmas season, Mass will include the intentions of all those for whom trees have been memorialized, whether living or deceased.

On Saturday, December 9th after the Vigil Mass, we will have a blessing of the trees, and after a countdown, light the trees which will then remain lit each evening during the whole Christmas season until the Feast of the Epiphany in January.

Please consider memorializing one of these beautiful trees. The cost to memorialize a tree will be \$150.00 each. This will cover the cost of the tree, lighting of the tree, and the memorial gift for the church.

You will find a Reservation Form inserted in the Bulletin and also in our churches which you can fill out and return to the Parish Office with your memorial offering (contribution or donation). Remember, the number of trees are limited so preserve yours as soon as possible.

God bless!

Fr. Abraham

EXHORTACIÓN APOSTÓLICA LAUDATE DEUM DEL SANTO PADRE FRANCISCO A TODAS LAS PERSONAS DE BUENA VOLUNTAD SOBRE LA CRISIS CLIMÁTICA

11. Ya no se puede dudar del origen humano —“antrópico”— del cambio climático. Veamos por qué. La concentración de gases de efecto invernadero en la atmósfera, que por ese efecto provocan el calentamiento de la tierra, se mantuvo estable hasta el siglo XIX, por debajo de las 300 partes por millón en volumen. Pero a mediados de ese siglo, en coincidencia con el desarrollo industrial, comenzaron a crecer las emisiones. En los últimos cincuenta años el aumento se aceleró notablemente, como lo ha certificado el observatorio de Mauna Loa, que toma medidas diarias de dióxido de carbono desde el año 1958. Mientras escribía la Laudato si' se alcanzó el máximo de la historia —400 partes por millón— hasta llegar en junio de 2023 a las 423 partes por 3 millón. [7] Más del 42% del total de las emisiones netas a partir del año 1850 se produjeron después de 1990. [8]

12. Al mismo tiempo verificamos que en los últimos cincuenta años la temperatura aumentó con una velocidad inédita, sin precedentes en los últimos dos mil años. En este periodo la tendencia fue de un calentamiento de 0,15 grados centígrados por década, el doble de lo ocurrido en los últimos 150 años. Desde 1850 hasta hoy la temperatura global aumentó 1,1 grados centígrados, fenómeno que se amplifica en las áreas polares. A este ritmo, es posible que en diez años alcanzaremos el límite máximo global deseable de 1,5 grados centígrados. [9] El aumento no se dio sólo en la superficie terrestre, sino también en varios kilómetros hacia arriba en la atmósfera, en la superficie de los océanos y aun en profundidades por cientos de metros. Así se incrementó además la acidificación de los mares y se redujeron sus niveles de oxígeno. Los glaciares se retraen, disminuye la cobertura nevosa y sube constantemente el nivel del mar. [10]

Nuestro Señor Jesucristo, Rey del Universo

“...Les aseguro que todo lo que hicieron por uno de mis hermanos, aún por el más pequeño, lo hicieron por mí.” - MATEO 25:40

La mayoría somos generosos cuando es conveniente para nosotros. Somos generosos cuando tenemos el tiempo o el dinero, pero la verdadera generosidad es lo opuesto a eso. Significa dar nuestro tiempo, el dinero, la compasión, el perdón o la misericordia cuando no es conveniente para nosotros, cuando no está en nuestro horario, sino en el tiempo de la otra persona.

Dear Father Lotha,

Apostolic Exhortation LAUDATE DEUM of the Holy Father Francis to All People of Good Will on the Climate Crisis

... Continued

11. It is no longer possible to doubt the human – “anthropic” – origin of climate change. Let us see why. The concentration of greenhouse gases in the atmosphere, which causes global warming, was stable until the nineteenth century, below 300 parts per million in volume. But in the middle of that century, in conjunction with industrial development, emissions began to increase. In the past fifty years, this increase has accelerated significantly, as the Mauna Loa observatory, which has taken daily measurements of carbon dioxide since 1958, has confirmed. While I was writing *Laudato Si'*, they hit a historic high – 400 parts per million – until arriving at 423 parts per million in June 2023. [7] More than 42% of total net emissions since the year 1850 were produced after 1990. [8]

12. At the same time, we have confirmed that in the last fifty years the temperature has risen at an unprecedented speed, greater than any time over the past two thousand years. In this period, the trend was a warming of 0.15° C per decade, double that of the last 150 years. From 1850 on, the global temperature has risen by 1.1° C, with even greater impact on the Polar Regions. At this rate, it is possible that in just ten years we will reach the recommended maximum global ceiling of 1.5° C. [9] This increase has not occurred on the earth's surface alone but also several kilometers higher in the atmosphere, on the surface of the oceans and even in their depths for hundreds of meters. Thus the acidification of the seas increased and their oxygen levels were reduced. The glaciers are receding, the snow cover is diminishing and the sea level is constantly rising. [10]
