A Message from the Health & Caring Ministry

The Heat Index has been at dangerous levels in recent days and this hot and humid weather can pose significant health hazards.

**Heat Stroke** is a life threatening situation. The body’s temperature control system shuts down and stops producing sweat to cool the body. Symptoms are: hot, red skin, changes in level of awareness, rapid, weak pulse and rapid shallow breathing. Temperatures can rise to 105. Call 9-1-1. Move victim to a cooler place. Cool the body, but DO NOT USE ICE. Watch for signs of breathing problems. Do not give anything to eat or drink if person refuses, is vomiting, or changes in level of awareness.

**Heatstroke** requires emergency treatment. **Untreated heatstroke** can quickly damage your brain, heart, kidneys and muscles. The damage worsens the longer treatment is delayed, increasing your risk of serious complications or death.

**Heat Exhaustion** occurs when heavy exercising or working in a warm humid place causes body fluids are lost through heavy sweating. Blood flow to the skin increases, causing blood flow to decrease to the vital organs. The result is mild shock if not treated. Body temperature will keep rising and the victim may suffer heat stroke. Symptoms are cool moist pale or flushed skin, heavy sweating, headache, nausea or vomiting and exhaustion. Body temperature will be near normal. To treat: get victim out of heat into cooler place, apply cool wet cloth. If conscious, give cool water, not ice water, to drink. Make sure the person drinks slowly. **Never give liquids that contain alcohol or caffeine.**
